NS EDGE

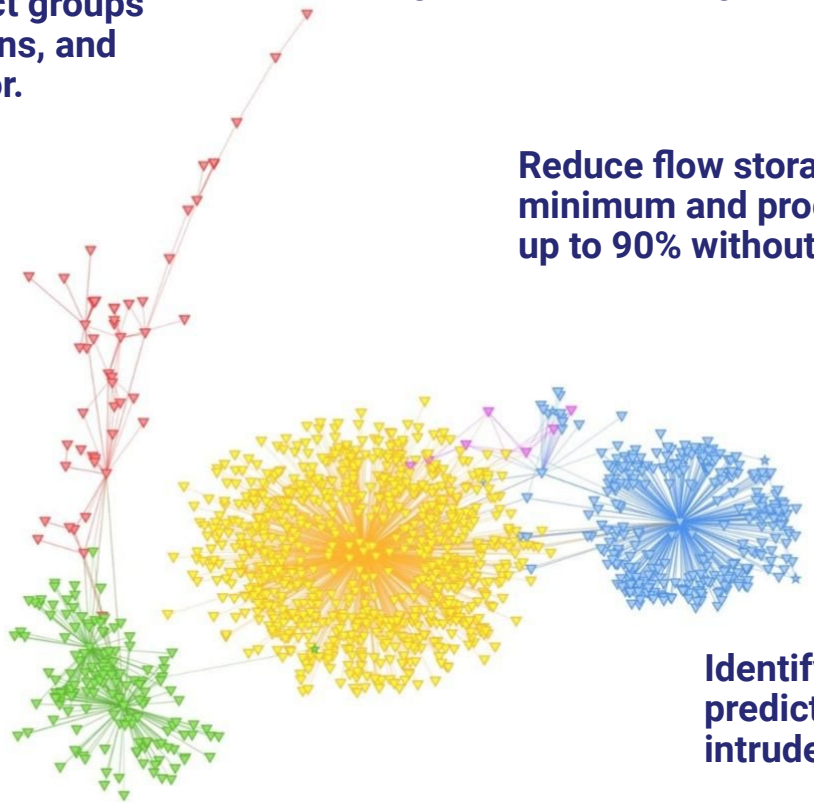
Our Solution

Use ML algorithms to automatically detect groups of users, applications, and anomalous behavior.

Join network flow/DNS data with logs and alerts *on ingest*

Reduce flow storage to bare minimum and processing costs up to 90% without tradeoffs.*

Integrate with existing tooling, making the whole greater than the sum of its parts.



Apply a lighting fast, scalable data parsing in a secure way.

Identify and remediate risk while predicting the probable paths of an intruder.

Translate flow logs / PCAP into human readable format.

NIST Cybersecurity Framework

* Based on Amazon AWS Elastic, Ultrawarm, and Glacier projections vs ElasticSearch “hot”
